

WITH PIPELINE PARALLELISM (PP)

Interleaved Execution

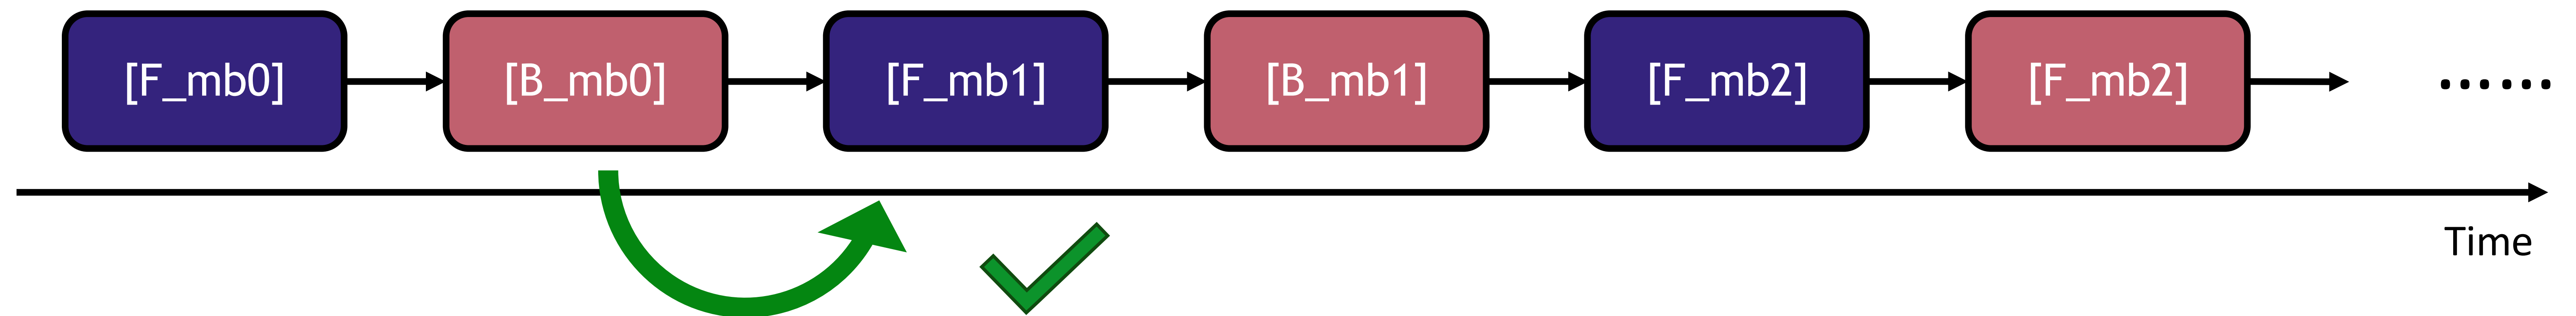

Cannot share graphs across microbatches: F_mb(i+1) executes **BEFORE** B_mb(i) completes

Result: **$L \times M \times 2$** graphs total

WITHOUT PIPELINE PARALLELISM (Non-PP)

Sequential Execution

Safe to share graphs across microbatches: F_mb(i+1) executes **AFTER** B_mb(i) completes

Result: **$L \times 2$** graphs total
