

Task demands on goal-directed execution

Each demand may exercise several capabilities; one common pressure is shown below.

1 Deep decomposition

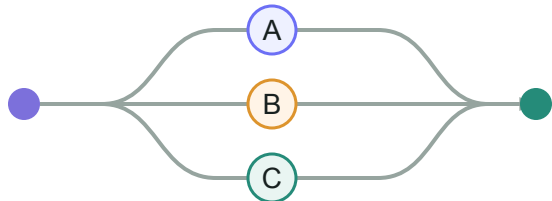

High-level objectives branch into many sequential and parallel subtasks.

CAN PRESSURE
Goal formation

2 Parallel investigation and synthesis

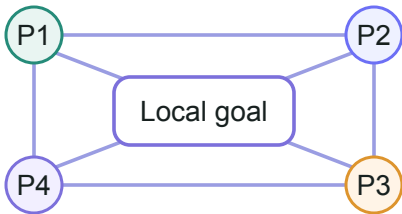

Evidence for one decision is spread across files, sources, and tools.

CAN PRESSURE
State construction

3 Entangled constraints

A local goal must balance several parent goals whose requirements constrain one another.

CAN PRESSURE
Goal stability

4 Long dependent chains

Later work depends on earlier steps and conclusions being correct.

CAN PRESSURE
Verification
