

Filter-based method
(e.g., Aibrix-KV\$)

```
1 req = receive()
2 kv_hit = KV$.match(req)
3 if BS.max()- BS.min() > Range:
4     # Load balance
5     sched_to = instances
6     .select_min(BS)
7 else: # KV$-awareness
8     sched_to = instances
9     .select_max(kv_hit)
10    .select_min(bs)
11 req.forward(sched_to)
```
