

(a)

e.g., KV\$ hit ratio

e.g., batch size

$$\lambda KV_i + (1 - \lambda) LOAD_i$$

(Linear)

Score_i = $\lambda KV_i \times (1 - \lambda) LOAD_i$

(Multiplication)

(b)

```
1 req = receive()  
# += len(prompt) - KV$.hitted(req.prompt)  
2 new_tokens = P_tokens.update(req.prompt)  
3 work = BS.update(1) # += 1  
4 sched_to = instances  
   .select_min(new_tokens * work)  
5 req.forward(sched_to)
```

One per instance

$$\lambda KV_i \times (1 - \lambda) LOAD_i$$
