

1 Lax Program

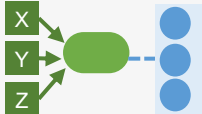

Compute abstract expression of the input Lax program

2 Kernel and block graph generation (§4.1)

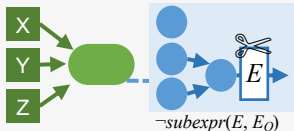

Start from the inputs of the Lax program

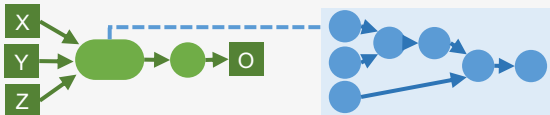

Repeatedly generate kernel and block operators

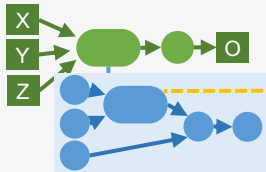

Prune out prefixes via abstract expressions (§4.3)

Generate kernel and block graphs w/o thread-graph-defined operators

3 Thread graph construction (§4.2)

Fuse subgraphs matching a pre-defined pattern to thread-graph-defined operators
